Dear Patient,

enclosed you can see the MRI examination protocol for the pelvis.

Please make the examination with empty bladder!

Positioning on the table:

-prone position, feet first

-use of a dedicated pelvic coil with respect to a higher resolution would be recommended.

The following sequences before administration of contrast agent:

-T2 fse, sagittal

-T2 fse coronar

-T1 fse axial fatsat (fs)

-T1 fse sagittal fatsat (fs)

I.v. administration of gadolinium-based contrast agent, then:

-T1 fse axial fatsat (fs) KM

-T1 fse sagittal fatsat (fs) KM

Please send the CD with DICOM-images to the following address:
